

What is claimed is:

1. A to-be-provided information creator, which creates at least one Web page showing at least one piece of real estate information to be provided through a network, said creator
 - 5 comprising:
 - a memory which stores the at least one piece of real estate information and at least one template for the at least one Web page; and
 - a page maker which creates the at least one Web page, by
 - 10 incorporating the at least one piece of real estate information stored in said memory into the at least one template stored in said memory.
 2. The to-be-provided information creator according to claim 1, wherein:
 - said memory stores a plurality of pieces of real estate
 - 15 information including the at least one piece of real estate information; and
 - said page maker incorporates two or more pieces of real estate information included in the plurality of pieces of real estate information, into the at least one template, in such a manner that the
 - 20 plurality of pieces of real estate information are successively displayed in a list form on a single Web page.
 3. The to-be-provided information creator according to claim 1, wherein
 - said memory stores a plurality of pieces of real estate
 - 25 information including the at least one piece of real estate information

T05260-60E79660

and a plurality of templates including the at least one template, and
said creator further including:

a template selector which selects the at least one template for the
at least one Web page, from the plurality of templates stored in said
5 memory, in response to a request from a user of said to-be-provided
information creator; and

an information selector which selects the at least one piece of
real estate information from the plurality of pieces of real estate
information stored in said memory, in response to a request from the
10 user, and

wherein said page maker incorporates the at least one piece of
real estate information selected by said information selector, into the
at least one template selected by said template selector.

4. The to-be-provided information creator according to claim
15 2, wherein

said memory stores a plurality of templates including the at least
one template, and said creator further including:

a template selector which selects the at least one template for the
at least one Web page, from the plurality of templates stored in said
20 memory, in response to a request from a user of said to-be-provided
information creator; and

an information selector which selects the two or more pieces of
real estate information, from the plurality of pieces of real estate
information stored in said memory, in response to a request from the
25 user, and

09961309-092501
T05260-50ET9660

wherein said page maker incorporates the two or more pieces of real estate information selected by said information selector, into the at least one template selected by said template selector.

5. The to-be-provided information creator according to claim

5 3, wherein:

the at least one Web page to be created by said page maker includes a plurality of Web pages in a hierarchical structure;

said memory stores linking information for providing a linking relationship between high and low levels of the hierarchical structure;

10 and

said page maker creates all Web pages included in the hierarchical structure, using the linking information.

6. The to-be-provided information creator according to claim

4, wherein:

15 the at least one Web page to be created by said page maker

includes a plurality of Web pages in a hierarchical structure;

said memory stores linking information for providing a linking relationship between high and low levels of the hierarchical structure;

and

20 said page maker creates all Web pages included in the

hierarchical structure, using the linking information.

7. The to-be-provided information creator according to claim

5, further including:

an information retriever which retrieves real estate information

25 shown on another Web page, from the another Web page through a

00961309-60819660

network; and

an information storage unit which stores the information
retrieved by said information retriever in said memory.

8. The to-be-provided information creator according to claim
5 6, further including:

an information retriever which retrieves information regarding
real estate from another Web page through a network; and

an information storage unit which stores the information
retrieved by said information retriever in said memory.

- 10 9. A method for creating at least one Web page showing at
least one piece of real estate information to be provided through a
network, said method comprising the steps of:

storing the at least one piece of real estate information and at
least one template for the at least one Web page; and

- 15 creating the at least one Web page showing, by incorporating the
at least one piece of real estate information into the at least one
template.

10. The method according to claim 9, wherein:

- 20 said storing step includes a step of storing a plurality of pieces of
real estate information including the at least one piece of real estate
information; and

- said creating step includes a step of incorporating two or more
pieces of real estate information included in the plurality of pieces of
real estate information, into the at least one template, in such a way
25 that the plurality of pieces of real estate information are successively

10961309.092501
FO5260" 60ET9660

displayed in a list form on a single Web page.

11. The method according to claim 9, wherein

said storing step includes a step of storing a plurality of pieces of real estate information including the at least one real estate

5 information and a step of storing a plurality of templates including the at least one template, and said method further including the steps of:

selecting the at least one template for the at least one Web page from the plurality of templates, in response to a request from a user;

10 and

selecting the at least one piece of real estate information from the plurality of pieces of real estate information, in response to a request from the user, and

wherein said creating step includes a step of incorporating the
15 selected at least one piece of real estate information into the selected at least one template.

12. The method according to claim 10 wherein

said storing step includes a step of storing a plurality of templates including the at least one template, and said method further

20 including the steps of:

selecting the at least one template for the at least one Web page from the plurality of templates, in response to a request from a user; and

selecting two or more pieces of real estate information from the
25 plurality of pieces of real estate information, in response to a request

from the user, and

wherein said creating step includes a step of incorporating the selected two or more pieces of real estate information into the selected at least one template.

5 13. The method according to claim 11, wherein:

the at least one Web page to be created includes a plurality of Web pages in a hierarchical structure;

said method further includes a step of storing linking information for providing a linking relationship between high and
10 low levels of the hierarchical structure; and

said creating step includes a step of creating all Web pages included in the hierarchical structure, using the linking information.

14. The method according to claim 12, wherein:

the at least one Web page to be created includes a plurality of
15 Web pages in a hierarchical structure;

said method further includes a step of storing linking information for providing a linking relationship between high and low levels of the hierarchical structure; and

said creating step includes a step of creating all Web pages
20 included in the hierarchical structure, using the linking information.

15. The method according to claim 13, further including the steps of:

retrieving a piece of real estate information shown on another Web page, from the another Web page through a network; and

25 storing the retrieved information.

005250-60879660

16. The method according to claim 14, further including the steps of:

retrieving a piece of real estate information shown on another Web page, from the another Web page through a network; and

5 storing the retrieved information.

17. A program for controlling a computer to function as a to-be-provided information creator which creates at least one Web page showing at least one piece of real estate information to be provided through a network, and said creator comprising:

10 a memory which stores the at least one piece of real estate information and at least one template for the at least one Web page; and

a page maker which creates the at least one Web page by incorporating the at least one piece of real estate information stored
15 in said memory, into the at least one template.
